AI Capability Matrix Worksheet

A role-based view of who is where, what each person needs next and which learning track gets them there.

How to use it. Levels describe capability, not job grades. Fill it in with each person, and use it to plan learning, not to rank anyone.

1. The five capability levels

1 Aware and experimenting. 2 Augmented practitioner: uses AI well in their own craft. 3 Orchestrator: designs workflows that mix people, tools and agents. 4 Product and experience innovator: shapes AI-powered products. 5 AI-native and transformational: changes how the organisation designs.

2. The matrix

PERSON OR ROLE	LEVEL TODAY (1 TO 5)	STRONGEST DIMENSION	WEAKEST DIMENSION	LEVEL IN SIX MONTHS	LEARNING TRACK

3. Learning tracks to choose from

- [ ] A. Foundations: how AI works and where it fails
- [ ] B. AI in the craft: research, ideation, prototyping, writing
- [ ] C. Workflows and agents: designing how people and AI work together
- [ ] D. Designing AI products: behaviour, trust, feedback and error states
- [ ] E. Data and evaluation: judging whether an AI output is good
- [ ] F. Responsible AI and leadership: risk, fairness and change

4. The human edge

Where each person builds judgement, not only skill

Judgement, intuition, systems thinking, meaning-making, ethical decisions. Name one practice for each person.

Choose learning by capability, not by tool. Tools change every few months. The capability stays.
