AI Maturity Assessment Worksheet

Score your team on eight dimensions from real work, and find the one dimension that holds the rest back.

How to use it. Do this with your team, not for it. Score from evidence in the work (files, reviews, shipped outcomes), not from how confident people feel. Revisit it every quarter.

1. Scope and evidence

The team or organisation we are assessing
Name, size, the products it serves

The evidence we will use
Real work, reviews, shipped outcomes. Not self-report alone.

2. Score the eight dimensions

Score each from 1 to 5: 1 Awareness, 2 Application, 3 Integration, 4 Expertise, 5 Transformation. A score needs evidence beside it.

DIMENSION	SCORE (1 TO 5)	EVIDENCE FROM REAL WORK	WHAT WOULD EARN THE NEXT SCORE
AI literacy			
Tools and ecosystem			
AI-enabled design practice			
Workflow intelligence			
AI product expertise			
Data and evaluation			
Responsible AI			
Culture and leadership			

3. Reading the result

The level we are at, and why
The lowest scores limit the level. Do not average them away.

The dimension that holds us back
Often responsible AI, evaluation or culture, not tools

4. The top level, honestly

A team is AI-native only when all of these are true. Tick only what you can show.

- [ ] Every dimension scores 4 or higher
- [ ] At least four dimensions show top-level evidence
- [ ] The impact has lasted for more than a few months
- [ ] Responsible AI scores 4 or higher
- [ ] The scores rest on real work, not self-report

5. What we will do

Three moves for the next quarter
Each one should lift the weakest dimension

> Never measure the maturity of a team by how much work it hands to AI. Measure the quality of the judgement, the work and the outcomes.
