AI Scorecard Worksheet

A balanced view of adoption, productivity, quality, expertise and responsibility, so speed never hides a drop in quality.

How to use it. Set your own targets from your own baseline. Review it monthly with the team. Numbers in the example are illustrations, not benchmarks.

1. The scorecard

GROUP	MEASURE	BASELINE	TARGET	ACTUAL	SOURCE
Adoption					
Productivity					
Quality					
AI product expertise					
Responsible AI					

2. Reading it

What moved, and what did not
Look at quality beside speed

What we will change
One decision for each thing that did not move

3. Guardrails for the scorecard

- [ ] We measure outcomes, not how much work AI does
- [ ] Our targets are our own, not industry benchmarks
- [ ] Quality is measured next to speed
- [ ] We share what we learn with the team every month

> If speed rises and quality falls, you have not become more mature. You have become faster at producing average work.
