AI Maturity Assessment Worksheet

Score four lenses from real work, check the enablers, test whether AI is integrated and check controls before data.

How to use it. Do this with your team, not for it. Score from evidence in the work (files, reviews, shipped outcomes), not from how confident people feel. The weakest lens sets the level. Revisit it every quarter.

1. Scope and sector

The team or organisation we are assessing
Name, size, the products it serves

Our sector and what it asks of us
For example: banking, government, healthcare, enterprise, consumer. Name the main constraints on data and tools.

2. Score the four lenses

Score each from 1 to 5 (1 Exploring, 2 Practising, 3 Integrated, 4 Designing AI, 5 Leading). Name the evidence. Where there is none, score the lower number.

LENS	SCORE (1 TO 5)	EVIDENCE FROM REAL WORK	WHAT WOULD EARN THE NEXT SCORE
People and skills			
Ways of working			
Product			
Trust			

3. The enablers around the team

ENABLER	DO WE HAVE IT? (YES, BORROWED, NO)	WHO OR WHAT IT IS	THE GAP AND HOW TO CLOSE IT
Security, data protection and legal partners			
Evaluation skill (data science or similar)			
AI or machine-learning engineering			
Design technology and prototyping			

ENABLER	DO WE HAVE IT? (YES, BORROWED, NO)	WHO OR WHAT IT IS	THE GAP AND HOW TO CLOSE IT
Approved tools and safe data			
A sponsor with time to give			

4. Is AI integrated?

Integrated means AI no longer depends on individual enthusiasm. Pick three recent pieces of work at random and tick only what you can show for them.

- [ ] For each of the three, we can show whether AI was used, which rule applied and who checked it
- [ ] If our best AI user left tomorrow, the practice would continue
- [ ] A new joiner learns it from how the team works, not from one person

5. Controls before data

- [ ] Work on personal, client or regulated data has its controls in place before AI is used on it
- [ ] We know which data may never enter a tool, and everyone has been told
- [ ] Approved tools are listed and used
- [ ] A person decides at every high-stakes step
- [ ] Where our sector needs it, AI-assisted work leaves an audit trail
- [ ] Legal and security have seen our usage charter

6. Reading the result

Our level today, and why
Your level is your lowest lens. Trust is one of the four.

The lens or enabler that holds us back
Often Trust, evaluation or a missing skill, not tools

Our three moves for the next quarter
Take them from the chapter for your level

> Never measure the maturity of a team by how much work it hands to AI. Measure the quality of the judgement, the work and the outcomes.
