AI Capability Matrix Worksheet

Who is where, what each person needs next, and which skills you must borrow, grow or embed.

How to use it. Levels describe capability, not job grades. Fill it in with each person, for development conversations only. It is not a target for everyone, and it never goes on a team scorecard.

1. The five capability levels

1 Exploring: tries AI alone. 2 Practising: uses AI well in their own craft. 3 Integrated: works in shared workflows with checkpoints. 4 Designing AI: shapes how AI behaves in products. 5 Leading: changes how the organisation designs.

2. The matrix

PERSON OR ROLE	LEVEL TODAY (1 TO 5)	STRONGEST LENS	WEAKEST LENS	NEXT STEP	LEARNING TRACK

3. Skills around the team

A design team rarely has every skill AI needs. For each, say whether you have it, borrow it, or must build it.

SKILL	WHO HAS IT (INSIDE, BORROWED OR NONE)	HOW WE WILL GET IT (BORROW, GROW OR EMBED)	BY WHEN
AI or machine-learning engineering			
Evaluation and data science			
Design technology and prototyping			

4. Learning tracks to choose from

- [ ] A. Foundations: how AI works and where it fails
- [ ] B. AI in the craft: research, ideation, prototyping, writing
- [ ] C. Workflows and agents: designing how people and AI work together
- [ ] D. Designing AI products: behaviour, trust, feedback and error states
- [ ] E. Data and evaluation: judging whether an AI output is good
- [ ] F. Responsible AI and leadership: risk, fairness and change

5. The human edge

Where each person builds judgement, not only skill

Judgement, intuition, systems thinking, meaning-making, ethical decisions. Name one practice for each person.

Choose learning by capability, not by tool. Tools change every few months. The capability stays.
