AI Scorecard Worksheet

A balanced view of use, outcomes, capability and trust, so speed never hides a drop in quality.

How to use it. Use no more than six measures. Set your own targets from your own baseline and review monthly with the team. Never include any one person's AI use. Numbers in the example are illustrations, not benchmarks.

1. The scorecard

GROUP	MEASURE	BASELINE	TARGET	ACTUAL	SOURCE
Use					
Outcomes					
Capability					
Trust and partners					

2. Reading it

What moved, and what did not
Look at quality beside speed

What we will change
One decision for each thing that did not move

3. Guardrails for the scorecard

- [ ] We measure outcomes, not how much work AI does
- [ ] Our targets are our own, not industry benchmarks
- [ ] Quality is measured next to speed
- [ ] We share what we learn with the team every month

> If speed rises and quality falls, you have not become more mature. You have become faster at producing average work.
