Experimentation Canvas

Turn a North Star idea into the smallest experiment that will teach you something.

How to use it. Fill it in before every experiment, and again when it ends. A result that disproves your hypothesis is a good result.

1. The experiment

Hypothesis
What do we believe?

Assumption
What are we unsure about?

Experiment
The smallest thing we can build or test

Prototype
What will we create?

Target users
Who will test it?

Success criteria
What evidence would show success?

Duration
How long will it run?

Resources
Who and what do we need?

Learnings
What did we discover? Fill in at the end.

Decision
Stop, iterate or scale, and why

2. The call

- [ ] Stop
- [ ] Iterate
- [ ] Scale
